Booking.com Yunying Campaign (For Hotel Chains)

A special campaign for Millennium Chain Hotels. We invite several Genius KOLs to stay at Shanghai, Beijing, Chengdu Millennium hotels respectively and then promote with their genuine reviews. Also guests who win in a lottery can get free Millennium afternoon tea.

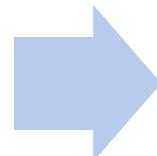

Product: Campaign Landing Page

Target User: Booking app users

User Analysis: Mostly loyal to Booking.com, but may need some incentives or discount to attract them to book high-level chains.

Solutions:

1. up to 20% off discount
2. free afternoon tea lottery
3. genuine reviews are our strong weapon, we invite KOLs to write reviews and highlight them to be more convincing.

Booking.com Yunying Campaign (For Seasonal Festival)

Booking.com runs seasonal campaigns to give users coupons and attract more bookings. The pages on the right are one example we run for Golden Week 2020. Chinese elements are applied in the Key Visual. And there are different sections such as chain banners, recommended hotel cards on the main landing page.

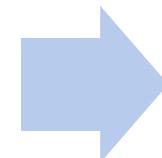

Product: Campaign Landing Page

Target User: Booking app users

User Analysis: Mostly loyal to Booking.com, but may need some incentives to make more bookings, especially before popular festive seasons.

Solutions:

1. give out great deal with coupon package
2. create festive atmosphere
3. show detailed chains or hotels by regions or level of popularity

Booking.com x Alipay UI Flow

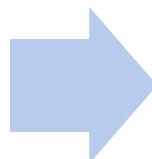

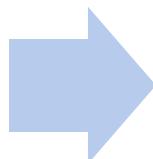

Cooperated with Booking.com product and tech teams, I have designed gift coupon/genius benefit landing pages for regular Alipay Membership Day, from wireframe to final high fidelity mockup. Also created UX flow to show how users retrieve Booking.com coupons, starting from Alipay membership page. We run the similar campaigns monthly and also in special seasonal festivals on Alipay, Didi and the other e-commerce partners.

Product Mode: User Flow to redeem coupons

Target User: Alipay Users who may need accommodations

User Analysis: Almost all mobile users in China are using Alipay, so it's great opportunity for us to promote on their membership campaigns, as long as we can quickly attract user clicks.

Solutions: 1. attract clicks with styling banners and clear copy 2. smooth the user flow after the clicks 3. direct each users to receive coupon or genius benefit successfully. 4. educate users how to use these rewards afterwards

Booking.com x Huawei Skytone UI Flow

Proposed Huawei with a new user flow from Huawei Skytone to Booking.com cobrand sites, in order to show more user-centered categories such as top destinations, daily deals and high classes, and to emphasize a hotel-focus section.

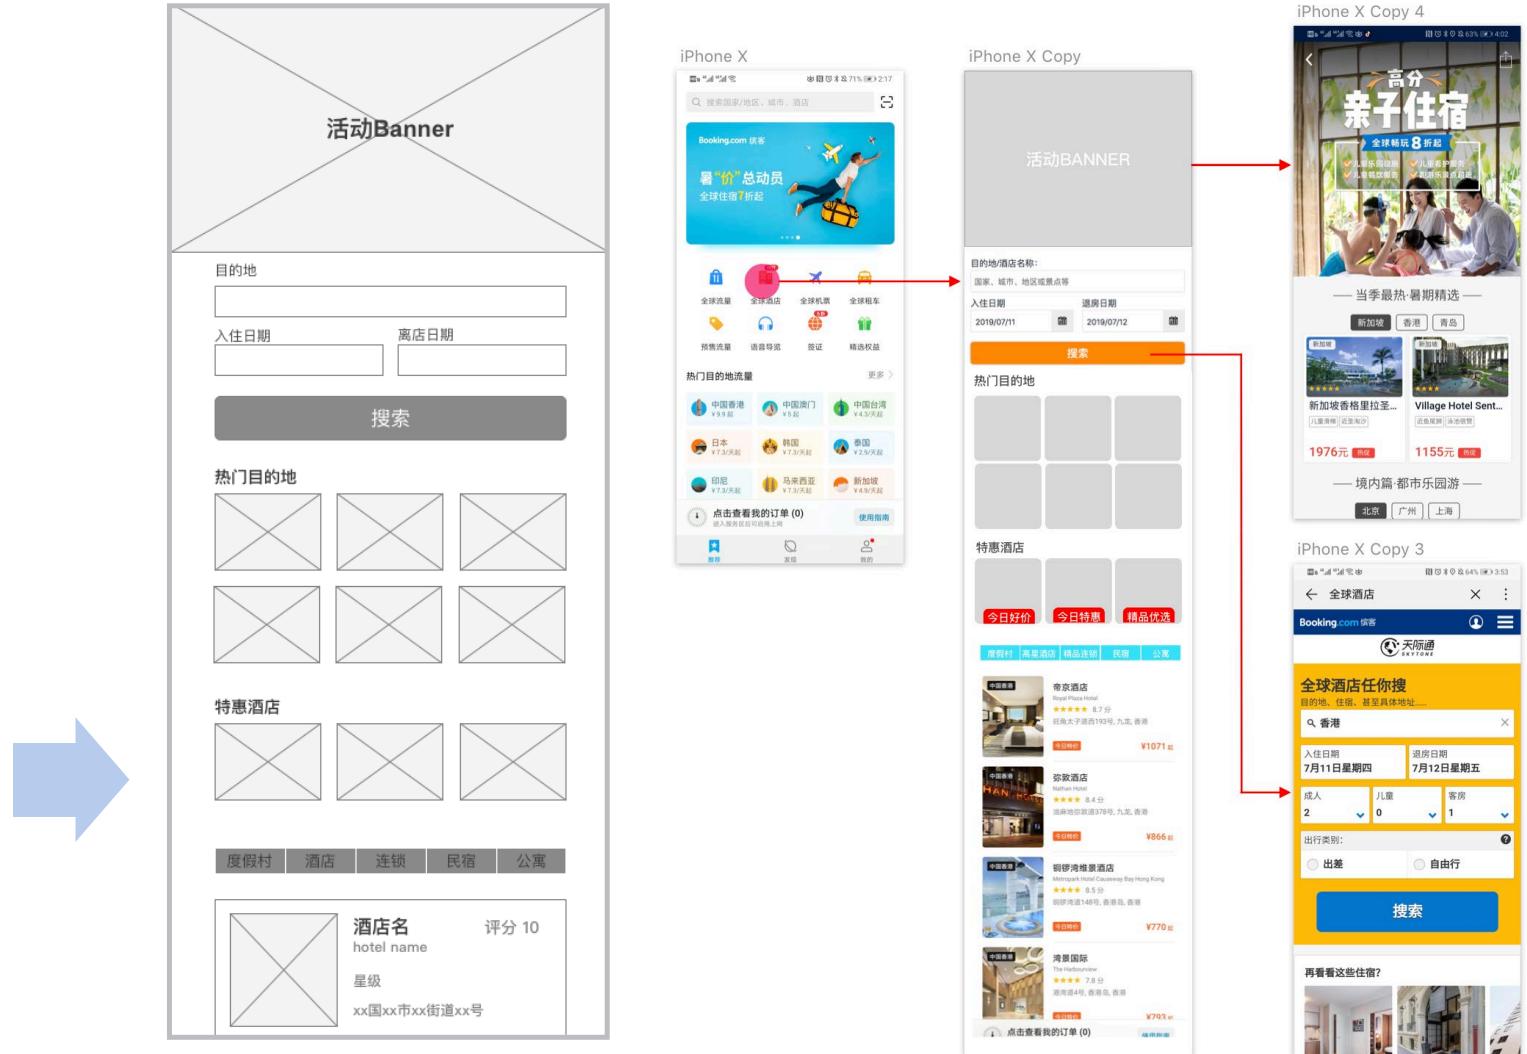

Product Mode: User Flow

Target User: Huawei Skytone Users

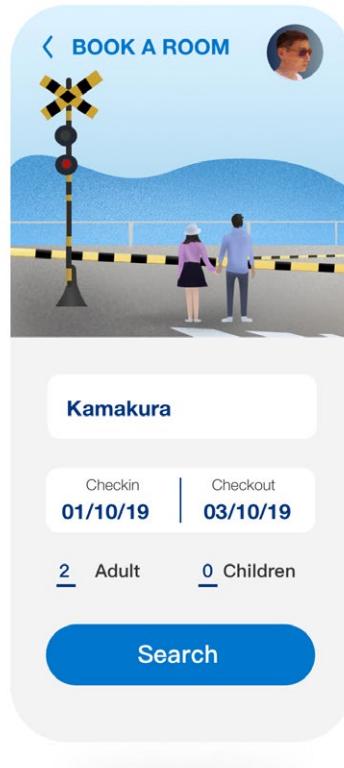

User Analysis: They are loyalty users of Huawei devices, and use Skytone to purchase their roaming data abroad. In most cases, they have strong demand on international trips and accommodation.

Painpoint: conversion is not good as users don't know Booking.com and feels lost if directly jump to Booking mdot

Solutions: 1.give users more direction by providing recommended destination and hotels 2. keep educating users about the brand by updating the campaign banners frequently 3. reduce unrelated information and let users focus on booking hotels

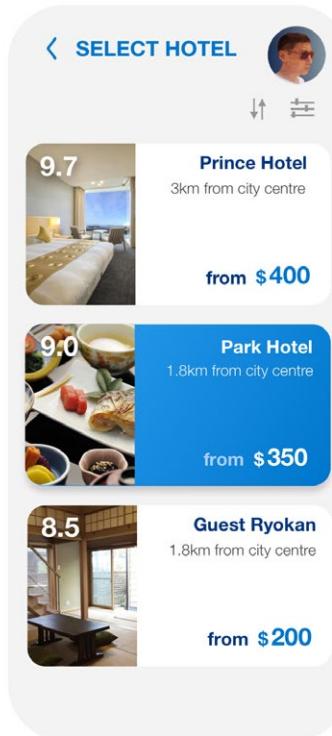

Personal Projects - Hotel and Game Apps

Hotel APP

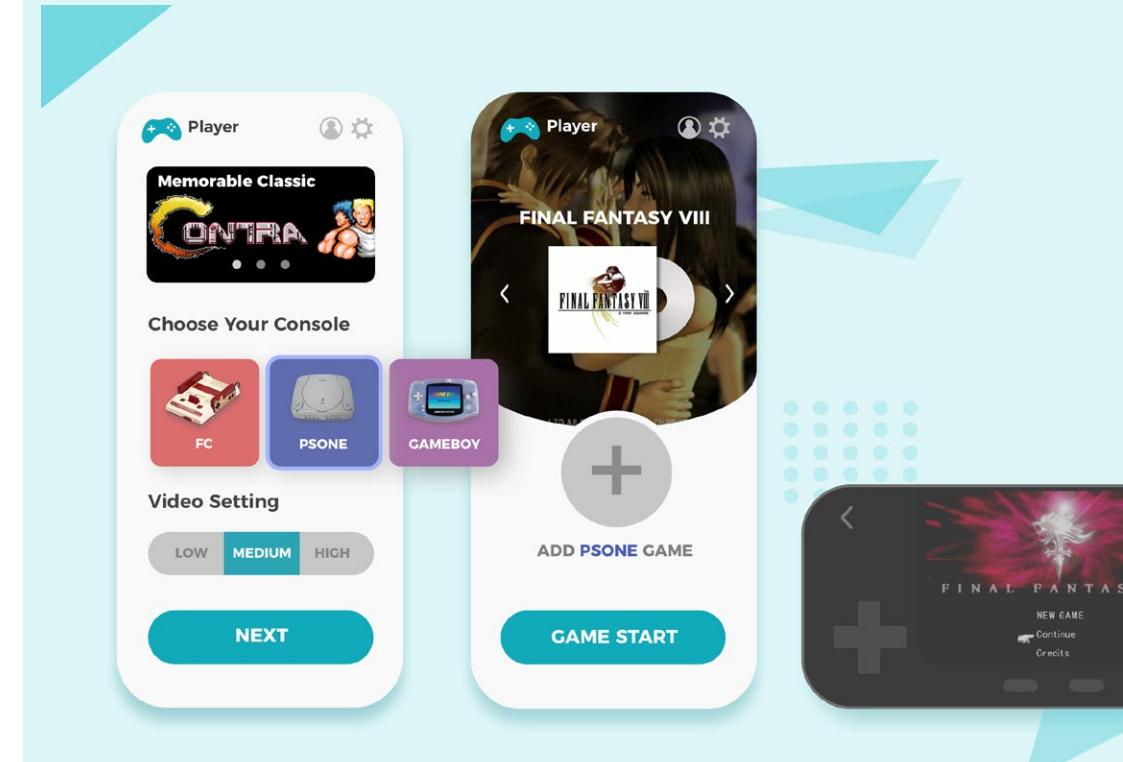

As personal UI practice, I have redesigned a hotel APP (from Booking.com) to simplify the interface by just leaving the most important elements. Also tried a cartoon illustration style for the KV.

Game Simulator App Design

Designed an App UI for running old classic console games on mobile.

The first App page includes banner spots, console options and main video settings. The second page will provide specific games as per console. Game list can be viewed by sliding the screen.

DESKTOP

Hotel Page for Bank/Airlines

The image displays two side-by-side screenshots of hotel booking websites, illustrating how partners can be integrated into the search interface.

Left Screenshot (Southwest Airlines):

- Header:** Shows the Southwest logo and "In partnership with Booking.com".
- Search Bar:** Includes fields for "Where are you going?", dates ("Tue, Jun 11 — Fri, Jun 7"), and guest information ("2 adults · 1 room").
- Promotion:** A large banner at the top left says "Book your hotel with us and earn up to 10,000 points per night." Below it, a callout box for "Southwest Rapid Rewards" offers 1 point for every US\$1 spent.
- Search Results:** Displays a grid of hotel listings, with one visible entry for "Groningen" featuring a night view of a canal and buildings.

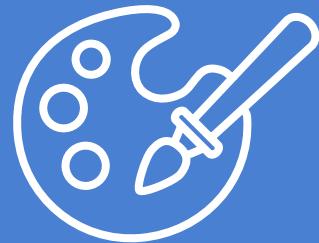

Right Screenshot (American Express):

- Header:** Shows the American Express logo and "In partnership with Booking.com".
- Promotion:** A banner at the top right encourages users to "Hunt for Easter deals and save 15% or more now through April 8th".
- Search Bar:** Includes a "Search" button.
- Destinations:** Lists recommended destinations: Saint Petersburg, Rome, London, Kraków, Budapest, and Warsaw.
- Search Results:** Displays a grid of hotel listings, with one visible entry for "Den Bosch" featuring a night view of a church tower.

Bank/Airlines

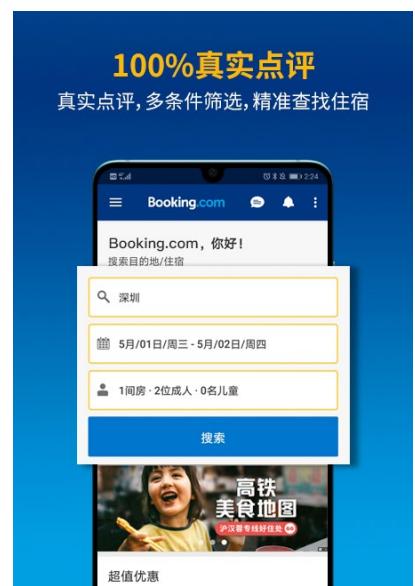

As partner's request, we can customise our searchbox area on hotel page to add promotion copy and branding background. We can also add loyalty banners when there's a loyalty exchange program running with partners. For some key partners, we monitor design changes by experiment tool to improve bookings.

面递海外，跨境零售需要这个.....

ZPD

在高时效物流需求成为竞争点的跨境电商市场，在接到订单进行生产后，如何快速直递海外是最为关键的问题，尤其是在旺季物流渠道呈堵堵状态的情况下。

全球直递——ZPD创造商品跨境零售的任意门

ZPD中美小包直递，一招搞定所有跨境电商难题！小件包裹跨境直递，直面海外消费者，是进入海外零售市场相对最“短、平、快”的物流解决方案。

• 时效稳定

直航包板包量运输，仅需1天即可收到物流生成信息，8天内妥投率达到96.88%。

• 一单到底

第一时间就获得最终单号，省去美国段操作的时间与人力成本。

• 决不计泡

采用实时计费的方式，0-5KG重量段选择，绝不计泡。

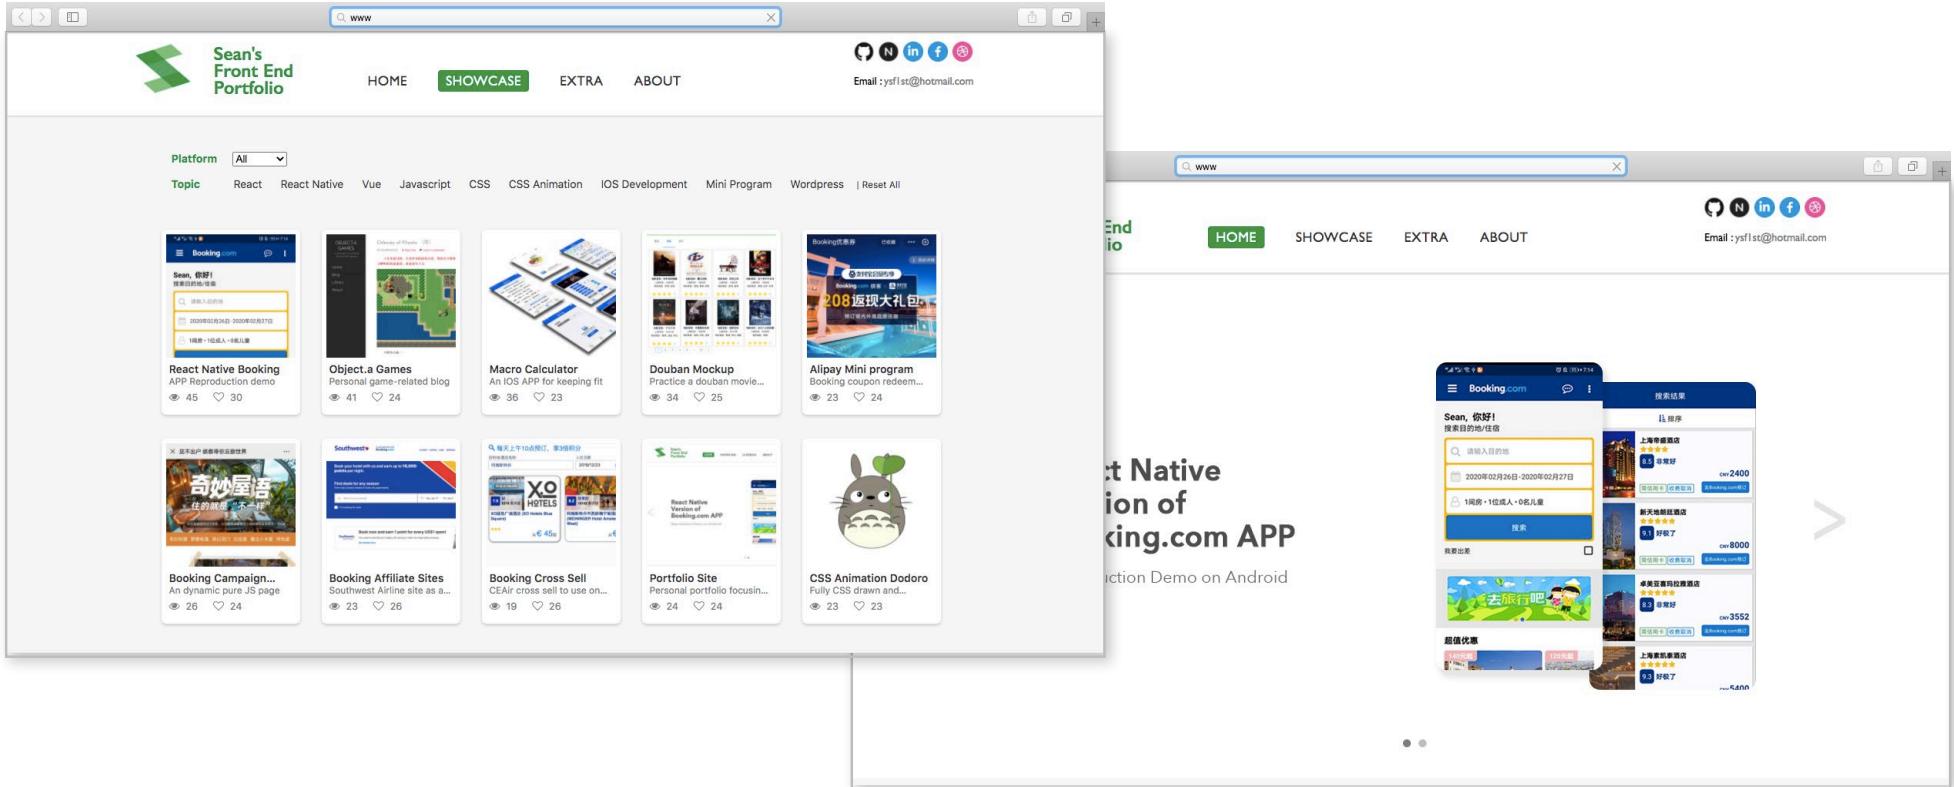

• 系统对接

支持全球电商平台、主流ERP系统订单信息导入及API推送，降低人工对接成本。

Language Used: HTML, SASS, Javascript, Vue, Vue-Router
Module Bundler: Webpack

Personal Project - Fiteness APP

I have created an IOS Chinese App myself called "卡路里标准计算器" (current version 1.1) from design to coding. The App can be found in Apple Store by searching the title or click the link below. Its target audience is who wants to keep diet but have no much idea on how to eat. Its function is to caculate how many calories every different individual would need per day, and then give the food suggestion.

APP LINK: <https://appsto.re/cn/vK0Ygb.i>

Design Tools: Sketch, Photoshop

Dev Platform: XCode (Tested on iPhone 5s)

Language Used: Objective-C

Personal Project - Booking APP Reproduction(Demo)

I reproduced Booking.com APP in React Native. Apparently React Native can fully support most functions on Booking.com while making the UI components quite flexible and manageable. As it's only a demo, I have only completed the main features of the APP such as : index page, swiper banner, searchbox (including group setting menu), avatar (with camera/photo function),search result, result sorting. To try this app, please download the fully tested android APK from the following link:

[https://github.com/sfyan/react-native-booking-app/tree/master/Android%20APK%20\(installation\)](https://github.com/sfyan/react-native-booking-app/tree/master/Android%20APK%20(installation))

Language Used: HTML,CSS, React Native, API Fetch

Module Bundler: Webpack

API: Booking Demand API

Personal Practice- CSS Animation/JS Calculator

Dodoro Animation

CSS Animation practice.

Used CSS to draw the cartoon shape, and then applied `-webkit-transform:rotate` and `-webkit-transform:translate` to control the moves of the eyes and the leave.

Please check the codes here:

<https://github.com/sfyan/cssAnimation/tree/master/dodoro>

Language Used: HTML, CSS

Web Calculator

JS practice.

Draw a calculator on web with HTML and CSS, and then add all rules of calculation with Javascript.

Please check the codes here:

<https://github.com/sfyan/webCalculator>

Language Used: HTML, CSS, Javascript

THANK YOU .
