[UI · UX]

Booking.com x Alipay Campaign

Cooperated with Booking.com product and tech teams, I have designed gift coupon landing pages for monthly Alipay Membership Day, from wireframe to final high fidelity mockup. Also created UX flow to show how users retrieve Booking.com coupons, starting from Alipay membership page. We run the similar campaigns monthly and also in special seasonal festivals on Alipay, Didi, Huawei and the other e-commerce partners.

2019 April Alipay Membership Day:

Booking.com was Alipay's top sponsor in this month, users had chances to win a Chanel Bag in the lottery while they receive dBooking.com coupons. Therefore, we add diverse coupons by different regions such as Japan, Thailand, Europe and created 4 regional landing pages to enhance the campaign atmosphere.

Alipay Regular Entrance:

Alipay provided a new banner position on their membership page for Booking.com, which would be promoted at long term. Product team invented a new categories of coupons to give 5%-10% discount to our Alipay users.

2019 July Alipay Membership Day:

In Alipay design guidelines, partner pages are required to include a curve shape between Key Visual and main content. To add creativity while following the guidelines, we utilised wave effect and image background this time.

Alipay Targeted Delivery:

From what Alipay data is shown, in order to increase our conversion, delivering different coupons to different level of users would be a better option. Thus, we created 3 landing pages, each of which is shown to a different user tier. The above page is for the highest tier.

Booking.com x Huawei Skytone UI

Proposed Huawei with a new user flow from Huawei Skytone to Booking.com cobrand sites, in order to show more user-centered categories such as top destinations, daily deals and high classes, and to emphasize a hotel-focus section.

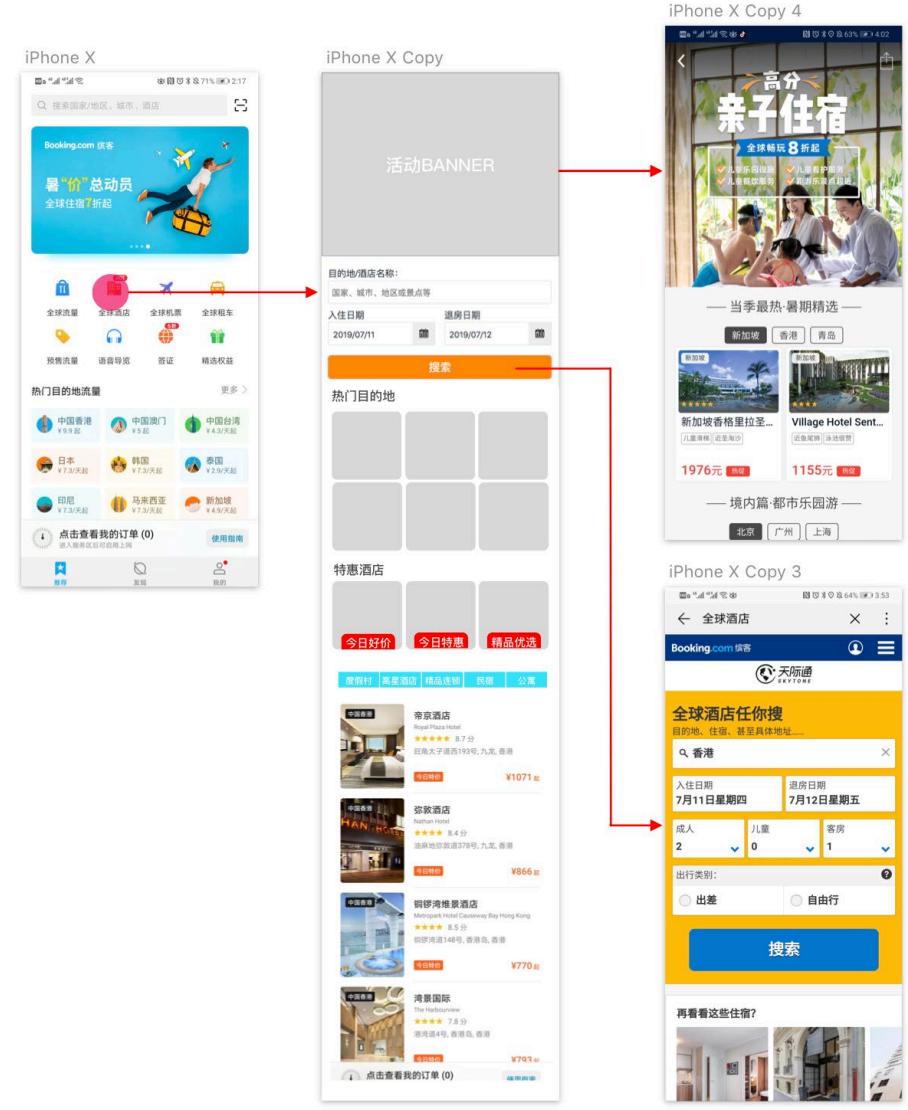

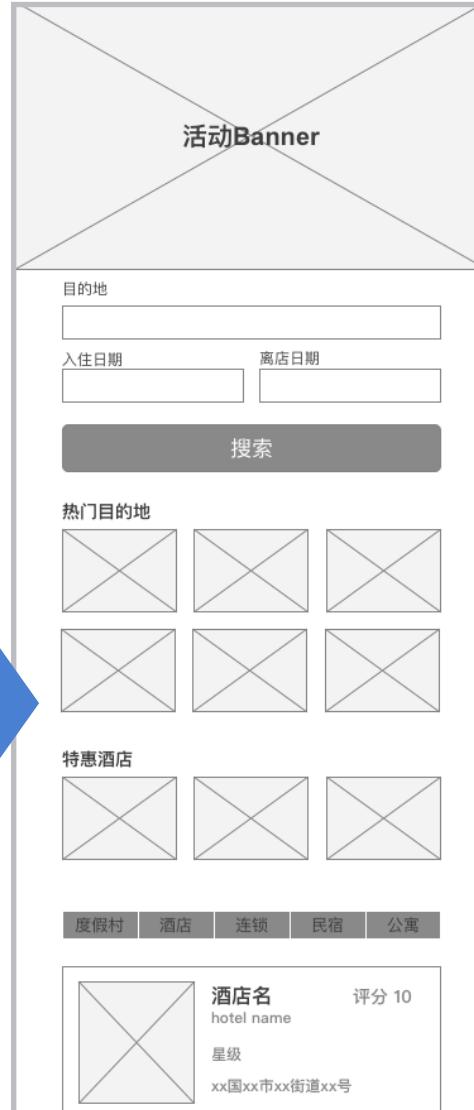

Product Mode: User Flow

Target User: Huawei Skytone Users

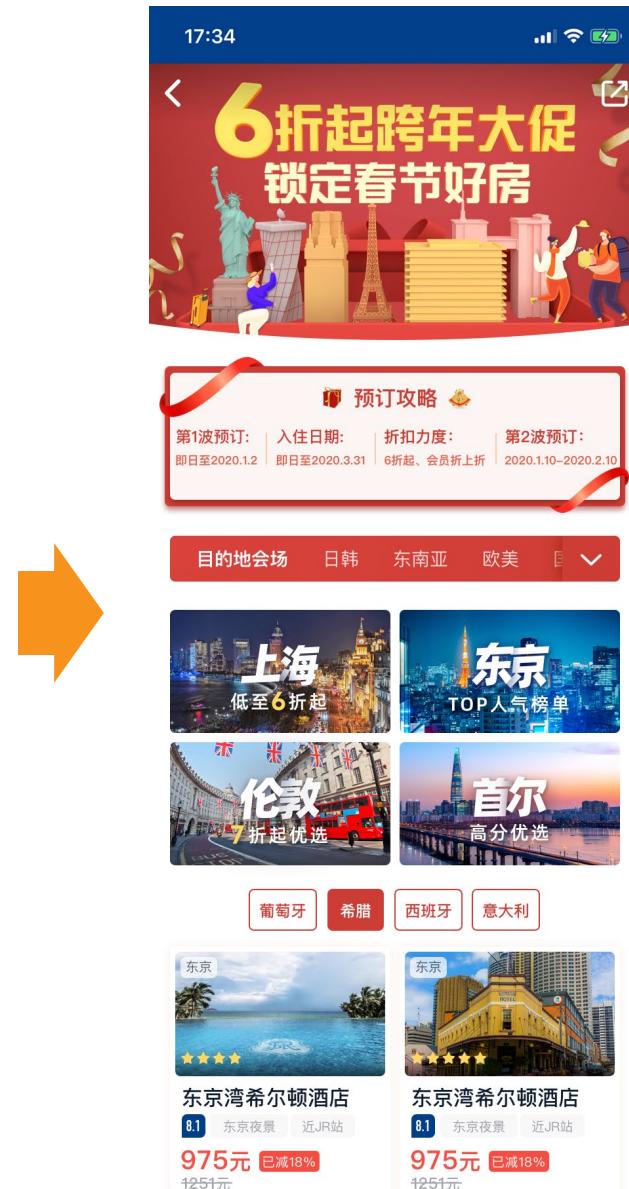

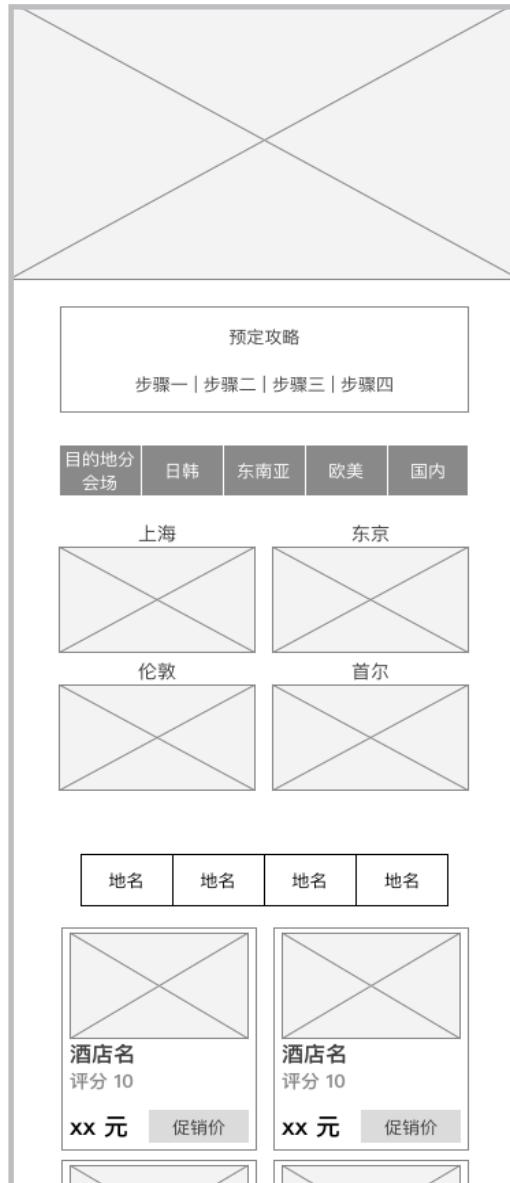

User Analysis: They are loyal to Huawei devices, and use Skytone to purchase their roaming data abroad. In most cases, they have strong demand on international trips and accommodation.

Painpoint: conversion is not good as users don't know Booking.com and feels lost if directly jump to Booking mode.

Solutions: 1. give users more direction by providing recommended destination and hotels 2. keep educating users about the brand by updating the campaign banners frequently 3. reduce unrelated information and let users focus on booking hotels

Booking.com China Deals Page

Personal Project - Fiteness APP

I have created an IOS Chinese App myself called "卡路里标准计算器" (current version 1.1) from design to coding. The App can be found in Apple Store by searching the title or click the link below. Its target audience is who wants to keep diet but have no much idea on how to eat. Its function is to caculate how many calories every different individual would need per day, and then give the food suggestion.

APP LINK: <https://appsto.re/cn/vK0Ygb.i>

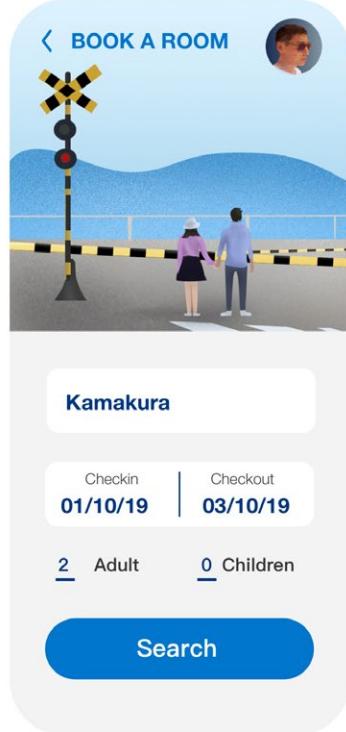

Design Tools: Sketch, Photoshop

Dev Platform: XCode (Tested on iPhone 5s)

Language Used: Objective-C

Personal Project - Hotel and Game APPs

Hotel APP

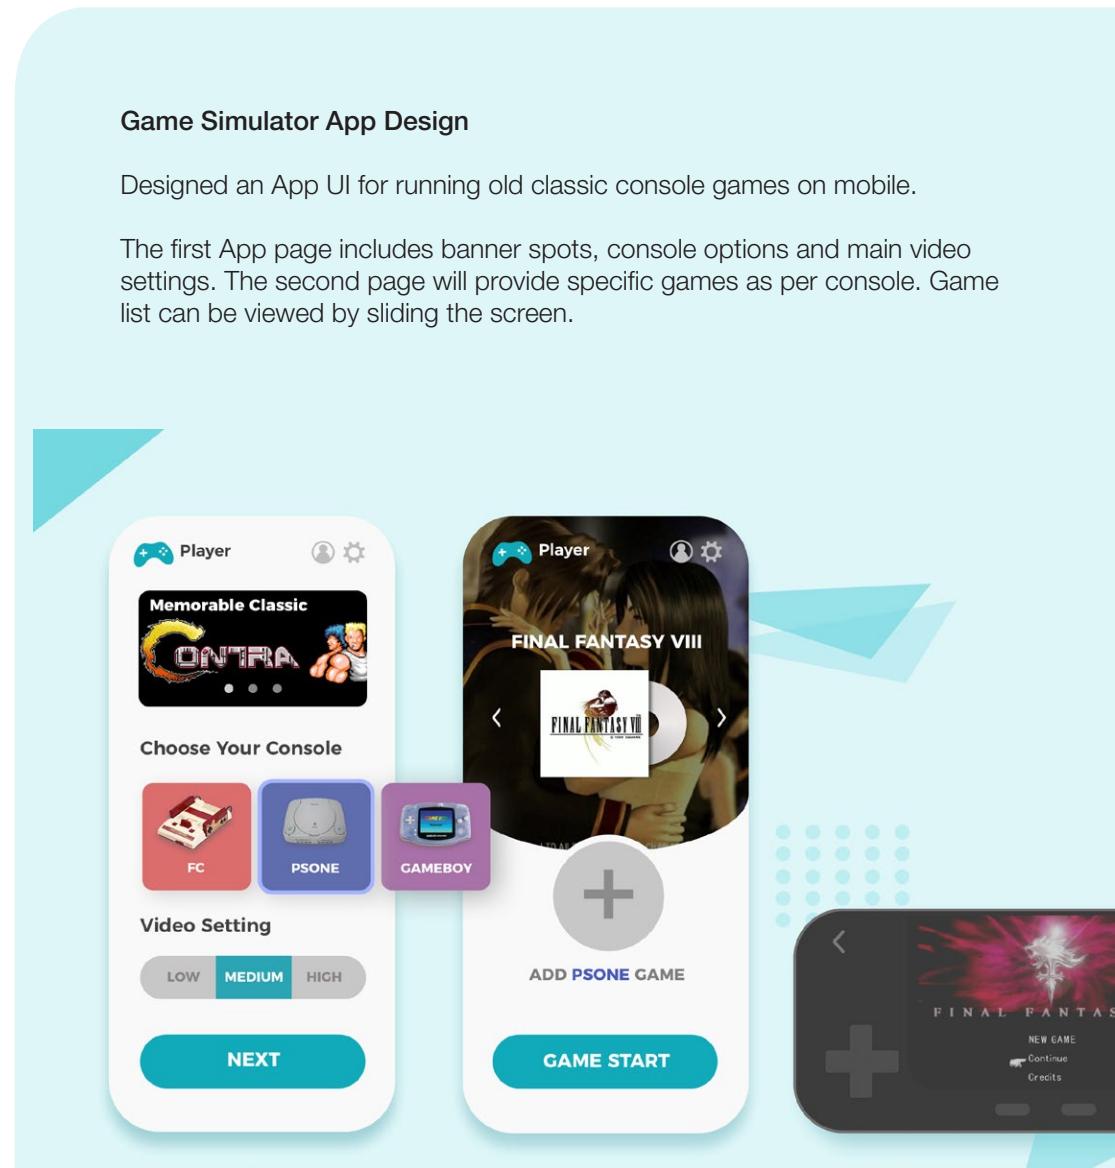

As personal UI practice, I have redesigned a hotel APP (from Booking.com) to simplify the interface by just leaving the most important elements. Also tried a cartoon illustration style for the KV.

Game Simulator App Design

Designed an App UI for running old classic console games on mobile.

The first App page includes banner spots, console options and main video settings. The second page will provide specific games as per console. Game list can be viewed by sliding the screen.

Booking.com Affiliate Websites

The screenshot shows a web browser window for the Southwest Airlines Rapid Rewards website. At the top, there's a header with the Southwest logo and a note "In partnership with Booking.com". Below the header, a banner says "Book your hotel with us and earn up to 10,000 points per night." A large background image features the Southwest airline tail logo. The search form includes fields for "Where are you going?", dates ("Tue, Jun 11 — Fri, Jun 7"), and guests ("2 adults · 1 room"). There's also a checkbox for "I'm traveling for work". Below the search form, a section titled "Book now and earn 1 point for every US\$1 spent" encourages users to provide loyalty info. A "Search" button is located at the bottom right of the search form area.

Southwest Airline Hybrid

As partner's request, we customised our searchbox area to add promotion copy and branding background for Southwest Airline. We usually keep this area as standard but for key partners, we are willing to do some changes and monitor the changes with our experiment tool.

As a result, this branding enhancement hasn't hurt any conversion so we put this fullon.

Language Used: HTML, TMPL, CSS, Javascript

China Southern Airline Customised Hybrid
synced the style with CSA official website

The screenshot shows a web browser window for the China Southern Airlines website. The header includes the China Southern logo and a note "提供支持 Booking.com". It has language and currency options: "元 人民币" and "简体中文". The main search area has tabs for "明珠俱乐部", "优惠信息", and "出行帮助". Below these are sections for "东京市中心" (Tokyo City Center) and "上海" (Shanghai), each featuring a cityscape image and travel tips like "观光, 购物, 美食". The search form at the bottom allows users to enter check-in and check-out dates, guest information, and a search term. Promotional banners for "订酒店, 赚积分" (Book Hotel, Earn Points) and "南航明珠里程10送15" (CSA Mingzhu Miles 10 for 15) are displayed.

Personal Project - Game Website

For my strong interest in Games, especially Role Playing Games, I created a gaming website called "Object.A Games" while I was learning Wordpress. Custom CSS and javascript are added onto the pre-installed Wordpress theme. Currently I'm using it as a game development blog.

Language Used: HTML,CSS, Javascript

CMS: Wordpress

Personal Project - CSS Animation/JS Calculator

Dodoro Animation

CSS Animation practice.

Used CSS to draw the cartoon shape, and then applied `-webkit-transform:rotate` and `-webkit-transform:translate` to control the moves of the eyes and the leave.

Please check the codes here:

<https://github.com/sfyan/cssAnimation/tree/master/dodoro>

Language Used: HTML, CSS

Web Calculator

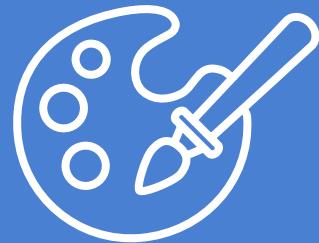

JS practice.

Draw a calculator on web with HTML and CSS, and then add all rules of calculation with Javascript.

Please check the codes here:
